

Getting Started with Hibernate 5.x

Step 1: Download the hibernate dependency from the official website <http://hibernate.org/>

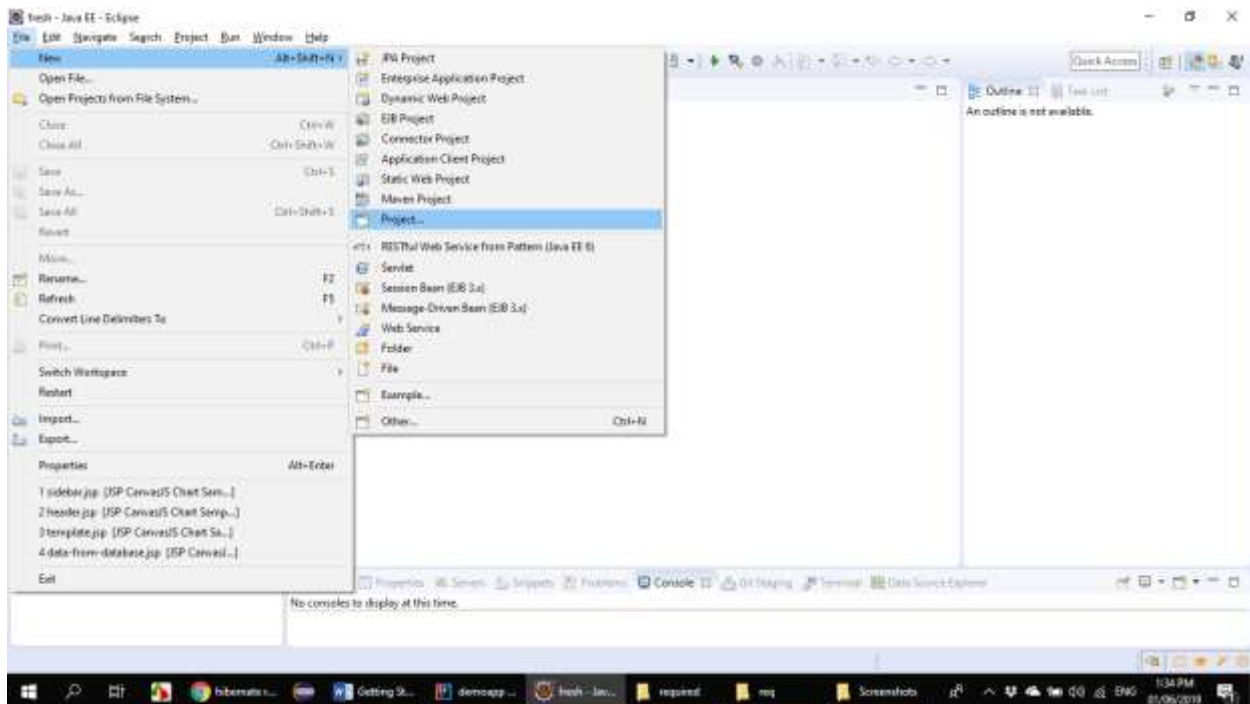

[Note Select Hibernate ORM -> Download Latest Stable Release]

Step 2: Extract the zip folder and you will see the required folder under the lib folder as below

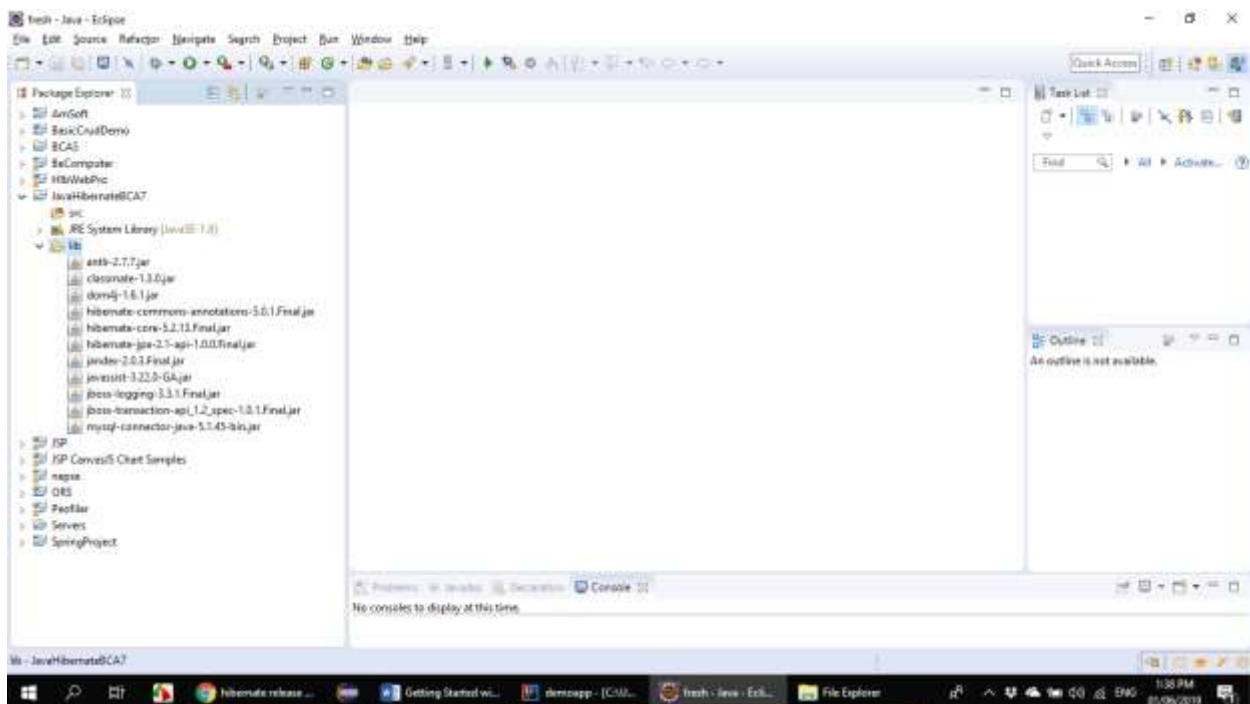

Step 3: Open eclipse and create new java project as shown in the figure below

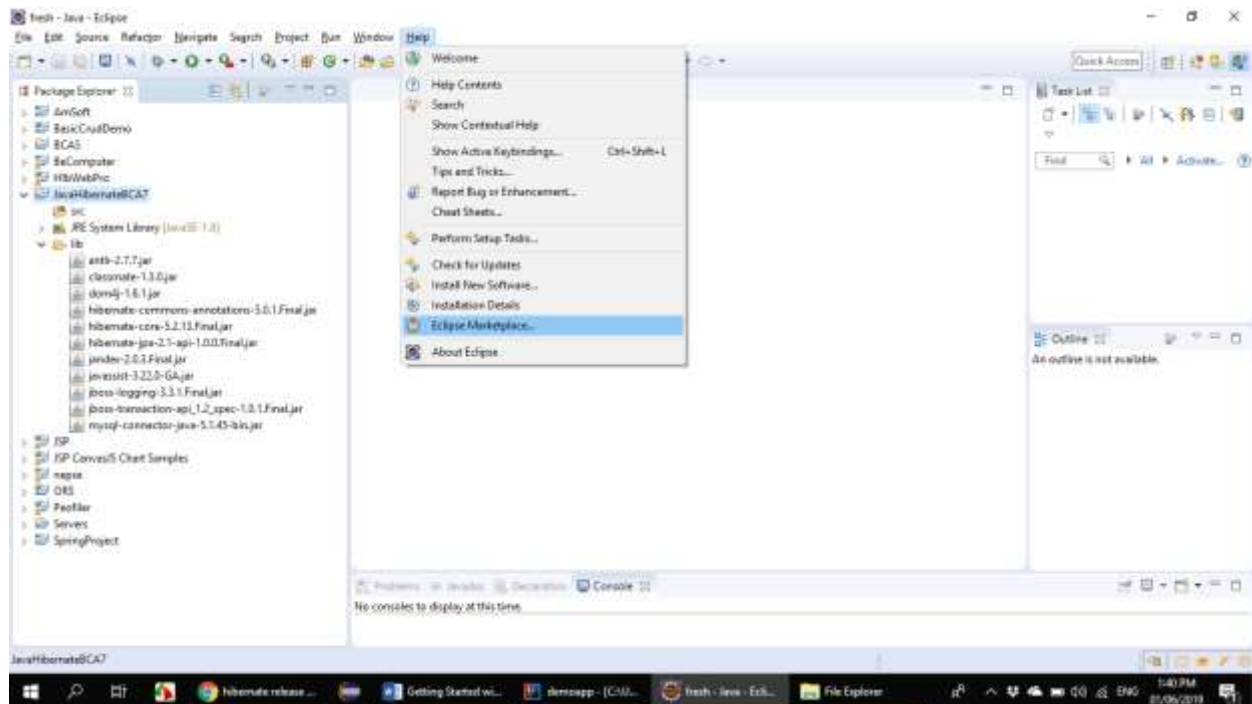

[Note: Select Java project and Click on finish]

Step 4: Now create a lib folder in your project and copy/paste all the required library from hibernate folder also download and copy/paste mysql connector file to work with database as shown below

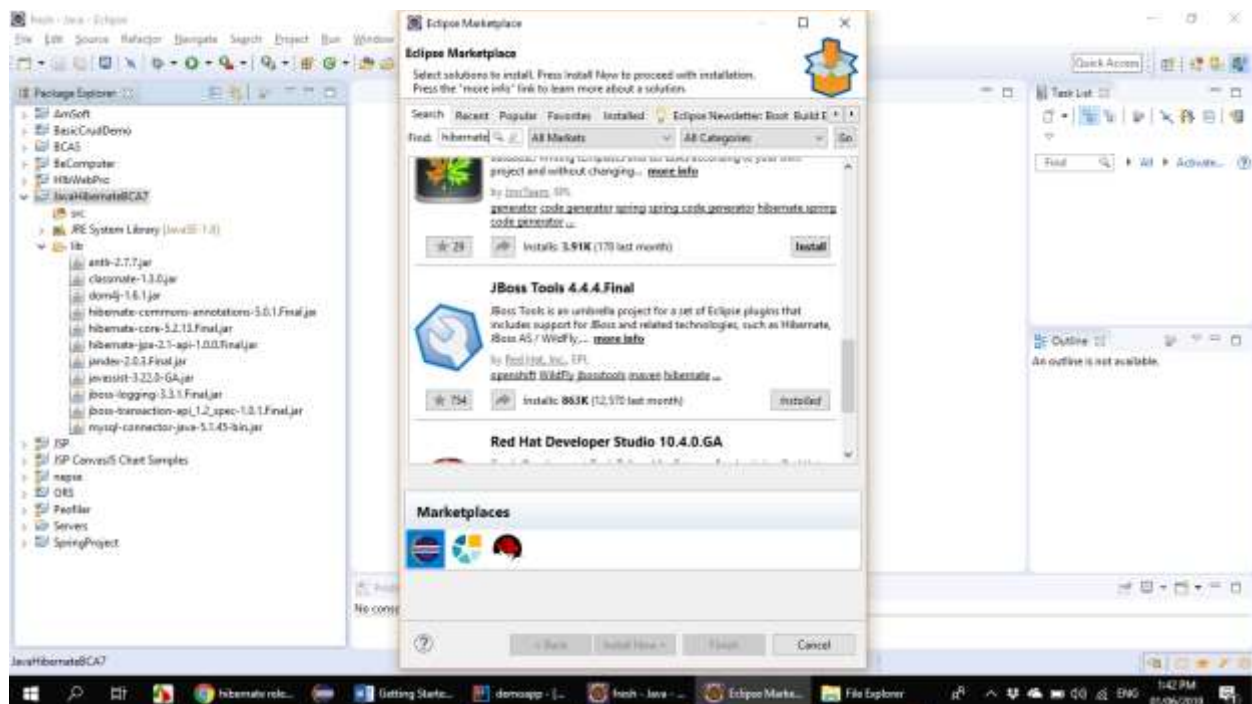

Step5: Download the JBoss Tool for hibernate that will make easy coding otherwise write manual hibernate.cfg.xml file

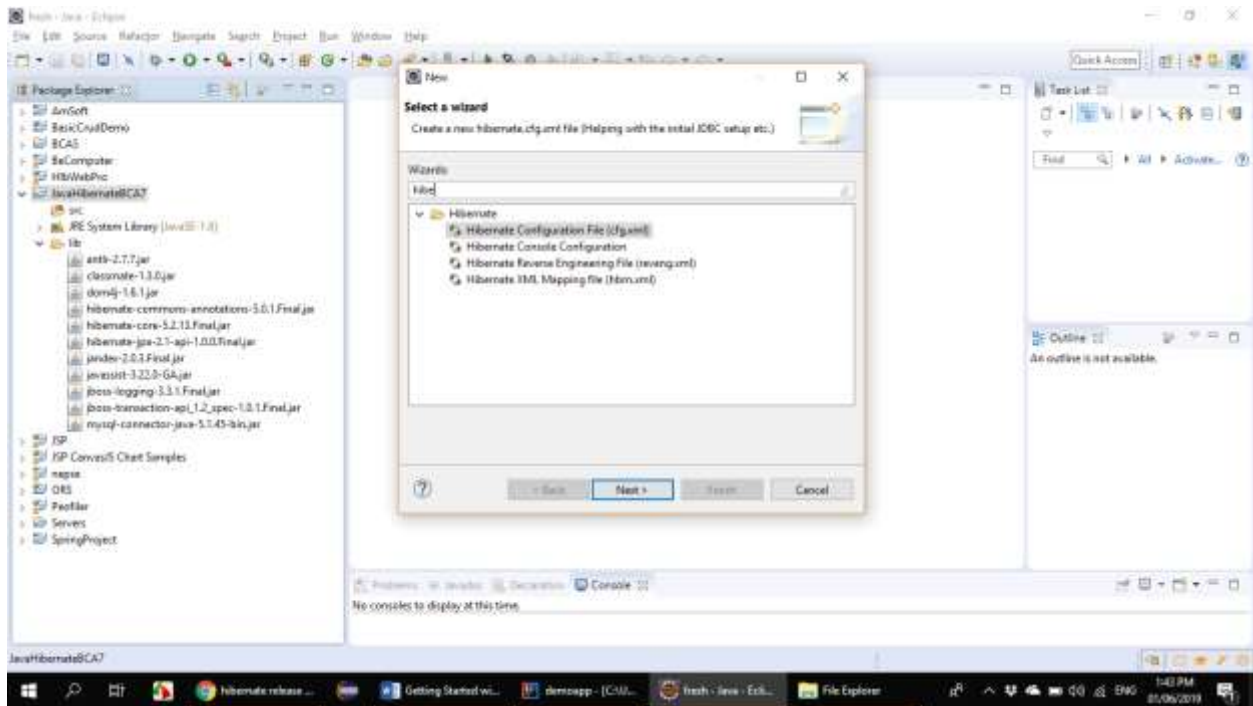

To install JBoss Tool follow the steps [Goto Help and select Eclipse Marketplace]

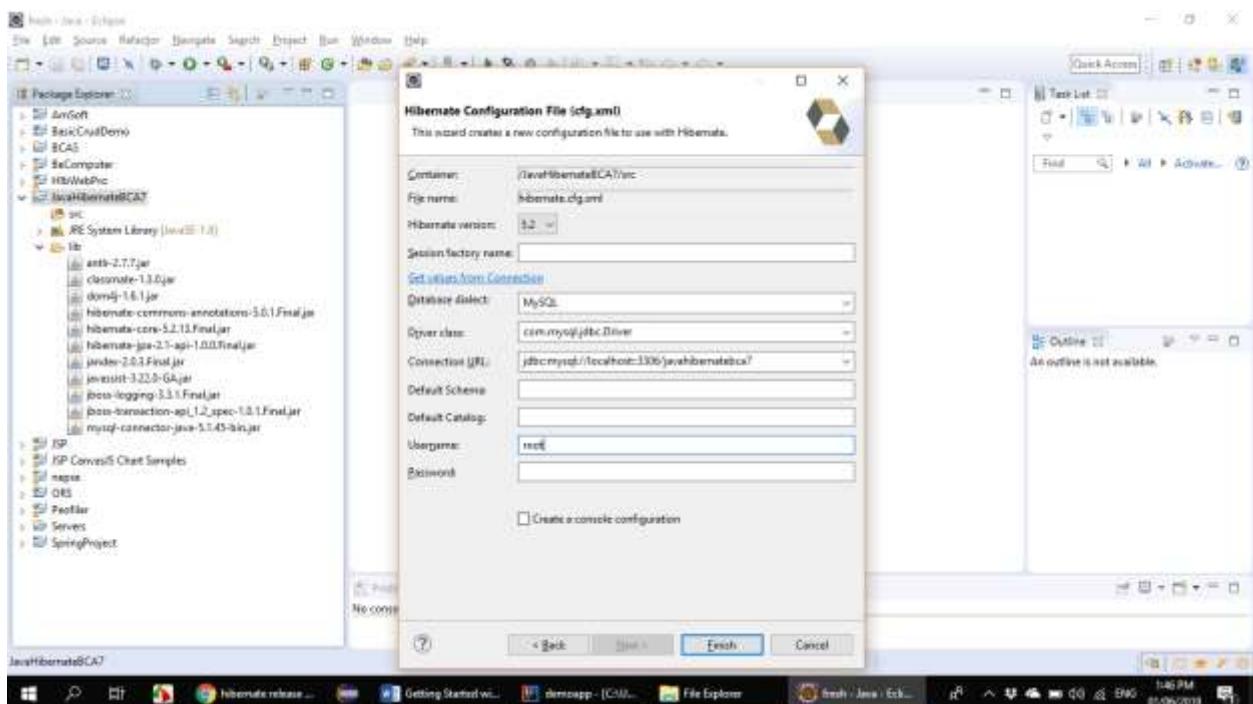

Search for Hibernate and scroll down you will see Jboss tools and click on install this will require internet connection

Once everything is downloaded you need to restart the eclipse and you will see screen below in new project - > other -> search hibernate

Step 6: Write down the hibernate.cfg.xml file as shown below and click on finish

Once you click on finish you will see hibernate configuration details as below

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE hibernate-configuration PUBLIC
    "-//Hibernate/Hibernate Configuration DTD 3.0//EN"
    "http://www.hibernate.org/dtd/hibernate-configuration-
3.0.dtd">
<hibernate-configuration>
    <session-factory>
        <property
name="hibernate.connection.driver_class">com.mysql.jdbc.Driver</proper
ty>
        <property
name="hibernate.connection.url">jdbc:mysql://localhost:3306/javahiber
natebca7</property>
        <property name="hibernate.connection.username">root</property>
        <property
name="hibernate.dialect">org.hibernate.dialect.MySQL5Dialect</property
>
    </session-factory>
</hibernate-configuration>
```
