

NEC COMPUTER LICENSE PREPARATION (2080/08)

Q: Which type of contract is not a "cost plus" contract?

- a) Cost plus fixed fee
- b) Cost plus incentive fee
- c) Cost and fixed assets ✓
- d) Cost plus percentage of cost

Q: In which year was the first expert system developed?

- a) 1960
- b) 1965 ✓
- c) 1970
- d) 1975

Q: What is another name for a simple SR flip-flop?

- a) A monostable multivibrator
- b) A bistable multivibrator ✓
- c) An astable multivibrator
- d) A Schmitt trigger

Q: What is an alternative name for pipelining?

- a) Assembly line operation ✓
- b) Parallel processing
- c) Sequential execution
- d) Batch processing

Q: How many interrupts are there in the 8085 microprocessor?

- a) 5
- b) 8
- c) 10
- d) 13 ✓

Q: What is the relationship between terminal voltage and emf?

- a) Terminal voltage is equal to emf
- b) Terminal voltage is greater than emf
- c) Terminal voltage is less than emf ✓
- d) There is no relationship between terminal voltage and emf

Q: If a delta connection has 3 ohms of resistance, what is the equivalent resistance in a star connection?

- a) 1 ohm ✓
- b) 3 ohms
- c) 9 ohms
- d) 27 ohms

Q: What type of learning algorithm is Naive Bayes?

- a) Unsupervised
- b) Supervised ✓
- c) Reinforcement
- d) Semi-supervised

YASHI ACADEMY: NEC License Preparation; Contact: 9802852790, 9802852791

Q: A 4 to 16 decoder can be used as a code converter. What will be the inputs and outputs of the converter, respectively?

- a) Binary, Octal
- b) Octal, Binary
- c) Hexadecimal, Binary ✓

Q: Which logic gate is the building block for an encoder?

- a) AND
- b) OR ✓
- c) NOT
- d) XOR

Q: In project management, what comes after the project idea in product design?

- a) Development
- b) Testing
- c) Implementation
- d) Design ✓

Q: Which of the following is a stable filter?

- a) RC filter
- b) LC filter
- c) Crystal oscillator ✓
- d) Op-amp filter

Q: How is frequency defined in AC?

- a) Number of waves per second ✓
- b) Time period of one wave
- c) Amplitude of the wave
- d) Phase difference between voltage and current

Q: Who appoints the auditor of NEC?

- a) NEC Executives ✓
- b) Shareholders
- d) Government

Q: Which OSI layer is responsible for binary transmission?

- a) Data Link layer
- b) Network layer
- c) Physical layer ✓
- d) Transport layer

Q: What type of grammar is a PDA (Pushdown Automaton) associated with?

- a) Type 0 grammar
- b) Type 1 grammar
- c) Type 2 grammar ✓
- d) Type 3 grammar

Q: What is a key characteristic of a Universal Turing Machine?

- a) Programmable ✓
- b) Fixed function
- c) Analog
- d) Quantum

Q: Which test is used to determine machine intelligence?

- a) Turing test ✓
- b) IQ test
- c) A/B test
- d) Unit test

YASHI ACADEMY: NEC License Preparation; Contact: 9802852790, 9802852791

Q: What component primarily uses BIOS?

- a) CPU ✓
- b) RAM
- c) Hard Drive

- d) Operating system

Q: Real-time operation depends on what two factors?

- a) Speed and accuracy ✓
- b) Time and memory
- c) Input and output
- d) Hardware and software

Q: What does distance vector routing depend on?

- a) Hop counts ✓
- b) Bandwidth
- c) Latency
- d) IP addresses

Q: What causes propagation delay?

- a) Network congestion
- b) Router processing time
- c) Distance between routers ✓
- d) Packet size

Q: What is the maximum number of nodes a binary tree can have based on height h ?

- a) 2^h
- b) $2^h - 1$ ✓
- c) $2^{(h+1)} - 1$
- d) $2^{(h-1)}$

Q: What is a requirement of a binary tree?

- a) Must be balanced
- b) Must be complete
- c) Must be sorted ✓
- d) Must have at least one child for each node

Q: Which transformation resizes an object?

- a) Translation
- b) Rotation
- c) Scaling ✓
- d) Shearing

Q: Which process runs after the Kernel bootstrap is executed?

- a) `/sbin/init` ✓

- b) /etc/init.d
- c) /boot/grub
- d) /proc/kmsg

Q: What is an encrypted message called?

- a) Plaintext
- b) Ciphertext ✓
- c) Keytext
- d) Hashtext

Q: What is the function of the application layer in networking?

- a) Data transmission
- c) User to system application ✓
- d) Error checking

Q: On which plane does 2D rotation occur?

- a) 3D plane
- b) 2D plane ✓
- c) XY plane
- d) XZ plane

YASHI ACADEMY: NEC License Preparation; Contact: 9802852790, 9802852791

Q: Which interrupt has the highest priority in 8086?

- a) INTR
- b) NMI (Non-Maskable Interrupt) ✓
- c) INT 0
- d) INT 3

Q: How many 16-bit registers are there in the 8085 microprocessor?

- a) 1
- b) 2 ✓
- c) 3
- d) 4

Q: What is the purpose of a Wait-for graph?

- a) Process scheduling
- b) Memory allocation
- c) Deadlock detection ✓
- d) File management

Q: What is the primary purpose of a special processor?

- a) General computation
- b) Special function ✓
- c) Data storage
- d) Network communication

Q: In networking, what term is used to describe excessive load?

- a) Overload
- b) Congestion ✓
- c) Saturation
- d) Bottleneck

Q: What is a key feature of a bus in computer architecture?

- a) Data transfer
- b) Priority handling ✓
- c) Memory access
- d) Interrupt handling

Q: Which of the following is not a combinational circuit?

- a) Multiplexer
- b) Decoder
- c) Adder
- d) Counter ✓

Q: How many categories of memory storage are there?

- a) 2 ✓
- b) 3
- c) 1
- d) 5

Q: What is the term for multiple processes executing concurrently in a single-user system?

- a) Multiprocessing
- b) Multitasking ✓
- c) Multithreading
- d) Time-sharing

Q: What configuration option does the PPP (Point-to-Point Protocol) system have?

- a) Encryption
- b) Compression

- c) Authentication ✓
- d) Multiplexing

Q: What is a key function of CMOS technology?

- a) High speed
- b) Low power consumption ✓
- c) High storage capacity
- d) High heat dissipation

IMPORTANT TIP:

To access more past questions, notes, practice sets, and mock tests, download the Yashi Academy App and start practicing to succeed.
