

Android Operating System

Introduction:

Android is a **Linux-based mobile operating system** developed by **Google**, primarily designed for **touchscreen devices** such as smartphones and tablets. It is **open-source**, meaning manufacturers can customize it for their devices.

- **Developer:** Google
 - **Initial Release:** 2008
 - **Latest Version:** Varies (Check official updates)
 - **License:** Open Source (AOSP) with proprietary components (Google services)
 - **Market Share:** Over 70% of global mobile OS market
-

Key Features of Android:

- ◆ **Open-Source & Customizable** – Anyone can modify Android's source code (AOSP).
 - ◆ **Google Play Store** – Largest app ecosystem (~3 million apps).
 - ◆ **Multitasking Support** – Run multiple apps simultaneously.
 - ◆ **Notifications Panel** – Unified system notifications with quick settings.
 - ◆ **Google Assistant & AI Integration** – Smart voice assistant and AI-based suggestions.
 - ◆ **Multiple Hardware Support** – Works on smartphones, tablets, smart TVs, wearables, and cars.
 - ◆ **File System Access** – Allows users to explore internal storage (unlike iOS).
 - ◆ **Custom ROMs & Rooting** – Users can install modified versions (e.g., LineageOS).
 - ◆ **Widgets & Home Screen Customization** – Unlike iOS, users can place widgets freely.
 - ◆ **Security Features** – Biometric authentication, sandboxing, and monthly security updates.
 - ◆ **5G & Foldable Phone Support** – Adapts to new mobile trends.
-

Pros & Cons of Android

✓ Pros:

- ✓ **Highly Customizable** – Users can modify themes, UI, and install third-party launchers.
- ✓ **Wider Device Availability** – Supports budget to premium devices.
- ✓ **Open-Source** – Encourages innovation and alternative firmware development.
- ✓ **More Hardware Choices** – Available on brands like Samsung, OnePlus, Xiaomi, etc.
- ✓ **Better File Management** – Unlike iOS, allows file transfers via USB and microSD support.
- ✓ **Supports Third-Party App Stores** – Users are not restricted to Google Play.
- ✓ **Fast Innovation & Features** – New updates include AI, gesture controls, and multi-window support.

✗ Cons:

X Fragmentation – Many devices run outdated Android versions, delaying updates.

X Security Risks – Open nature allows malware-prone third-party apps.

X More Resource-Intensive – Requires more RAM and battery compared to iOS.

X Bloatware Issues – Many manufacturers preinstall unnecessary apps.

X Inconsistent UI/UX – Different manufacturers apply custom skins (e.g., Samsung One UI, Xiaomi MIUI), making experiences inconsistent.

Comparison of Android with Other Mobile OSes

Feature	Android	iOS (Apple)	Windows Phone	Tizen	Ubuntu Touch
Developer	Google	Apple	Microsoft	Samsung	Canonical
Market Share	~70%	~28%	Discontinued	<1%	<1%
App Store	Google Play (~3M apps)	Apple App Store (~2M apps)	Microsoft Store	Tizen Store	OpenStore
Customizability	High	Very Limited	Medium	High	Medium
Device Availability	Wide Range	Apple Only	Discontinued	Limited	Limited
Security	Good	Excellent	Good	Good	Good
Open-Source?	Partially	No	No	Yes	Yes
Multitasking	Yes	Limited	Yes	Yes	Yes
File Transfer	USB & Bluetooth	Only via iTunes	USB	USB	USB
Updates & Support	Varies by manufacturer	Regular, long-term	Discontinued	Limited	Community-driven

Conclusion:

- **Android dominates the smartphone market** due to its open-source nature, affordability, and flexibility.
- **iOS is more secure & optimized**, but lacks customization.
- **Windows Phone, Tizen, and Ubuntu Touch failed** due to poor app support.
- **If you want flexibility & choice, go for Android.** If you want security & consistency, choose iOS.
