

Steps to Publish an Android App on Google Play

1. Prepare Your App

- Ensure your app is crash-free, complies with Google Play policies, and supports multiple screen sizes.
- Use a unique package name (e.g., `com.example.myapp`).

2. Generate a Signed AAB (Android App Bundle)

- In Android Studio: **Build** → **Generate Signed Bundle / APK** → **AAB**.
- Create a new keystore (`.jks` file) with a strong password, key alias, and validity of at least 25 years.
- Select the **Release** build variant and generate the AAB file.

3. Set Up a Google Play Developer Account

- Pay a **one-time \$25 fee** and complete your developer profile.
- Accept the **Developer Distribution Agreement**.

4. Create a New App in Play Console

- Go to **Google Play Console** → **Create App**.
- Enter the app name, default language, app type (**App/Game**), and pricing model (**Free/Paid**).

5. Upload Your AAB

- Navigate to **Release** → **Production** → **Create New Release**.
- Upload the signed **AAB** and include **release notes**.

6. Complete the Store Listing

- Add the **app name**, **description**, **screenshots (2-8)**, **high-resolution icon (512x512)**, and **feature graphic (1024x500)**.
- Select an appropriate **category**, complete the **content rating**, and provide a **privacy policy URL**.

7. Set Pricing & Distribution

- Choose whether your app is **Free or Paid** (Paid apps require a **Google Merchant Account**).
- Select **distribution countries** and opt-in for **Google Play App Signing** (recommended).

8. Review & Publish

- Go to **Release** → **Review Release**, check for any errors, and click **Start Rollout to Production** → **Publish**.

9. Wait for Approval

- Google reviews apps within a **few hours to several days**.
- If approved, your app goes live! If rejected, address the feedback and resubmit.
