

Creating Splash Screen with best and Worst Way

WORST WAY

Step 1: Create two Activity [MainActivity.java and SplashActivity.java]

MainActivity.java

```
public class MainActivity extends Activity {  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_main);  
    }  
}
```

SplashActivity.java

```
public class SplashActivity extends Activity {  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_splash);  
        new Handler().postDelayed(new Runnable() {  
            @Override  
            public void run() {  
                Intent intent = new Intent(SplashActivity.this, MainActivity.class);  
                startActivity(intent);  
                finish();  
            }  
        }, 4000);  
    }  
}
```

OR

```
public class SplashActivity extends Activity {  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_splash);  
        Thread t = new Thread(new Runnable() {  
            @Override  
            public void run() {  
                try{  
                    Thread.sleep(400);}catch(Exception e){}  
                    Intent intent = new Intent(SplashActivity.this, MainActivity.class);  
                    startActivity(intent);  
                    finish();  
                }  
            }  
        });  
        t.start();  
    }  
}
```

Step 2: Create two layout activity_main.xml and activity_splash.xml file

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>  
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
```

```

        xmlns:app="http://schemas.android.com/apk/res-auto"
        xmlns:tools="http://schemas.android.com/tools"
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        tools:context=".MainActivity">
<TextView
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:text="Welcome to My Application"/>
</RelativeLayout>

```

activity_splash.xml

```

<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent" android:background="@drawable/logo"
    android:theme="@style/Theme.AppCompat.NoActionBar">
</LinearLayout>

```

Step 3: Register MainActivity and SplashActivity to AndroidManifest.xml file

```

<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="np.com.sunilbist.bca">
    <application
        android:allowBackup="true"
        android:icon="@mipmap/ic_launcher"
        android:label="@string/app_name"
        android:roundIcon="@mipmap/ic_launcher_round"
        android:supportRtl="true"
        android:theme="@style/AppTheme">
        <activity android:name=".MainActivity"></activity>
        <activity
            android:name=".SplashActivity">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />
                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
    </application>
</manifest>

```

Step 4: Now launch the application and see result

BEST WAY

Step 1: Create Two Activity and one Application Java File [MainActivity.java, SplashActivity.java, and MyApp.java]

MainActivity.java

```

public class MainActivity extends Activity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
    }
}

```

```

        setContentView(R.layout.activity_main);
    }
}

```

SplashActivity.java

```

public class SplashActivity extends Activity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        Intent intent = new Intent(this, MainActivity.class);
        startActivity(intent);
        finish();
    }
}

```

MyApp.java

```

public class MyApp extends Application {
    @Override
    public void onCreate() {
        super.onCreate();
        SystemClock.sleep(300);
    }
}

```

Step 2: Copy and Paste logo file to drawable folder and drawable resources xml file [splash_background.xml]

splash_background.xml

```

<?xml version="1.0" encoding="utf-8"?>
<layer-list xmlns:android="http://schemas.android.com/apk/res/android">
    <item android:drawable="@drawable/background"/>
    <item>
<bitmap android:src="@drawable/logo"
        android:gravity="center"/>
    </item>
</layer-list>

```

Step 3: Create a style value xml file [style.xml]

style.xml

```

<style name="SplashTheme" parent="Theme.AppCompat.NoActionBar">
    <item name="android:windowBackground">@drawable/splash_background</item>
</style>

```

Step 4: Register Both Activity and Application file to application root xml tag in AndroidManifest.xml file

AndroidManifest.xml

```

<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="np.com.sunilbist.bca">

```

```
<application
    android:name=".MyApp"
    android:allowBackup="true"
    android:icon="@mipmap/ic_launcher"
    android:label="@string/app_name"
    android:roundIcon="@mipmap/ic_launcher_round"
    android:supportsRtl="true"
    android:theme="@style/AppTheme">
    <activity android:name=".MainActivity"></activity>
    <activity
        android:name=".SplashActivity"
        android:theme="@style/SplashTheme">
        <intent-filter>
            <action android:name="android.intent.action.MAIN" />
            <category android:name="android.intent.category.LAUNCHER" />
        </intent-filter>
    </activity>
</application>
</manifest>
```

Step 5: Now launch your Application and see your splash screen.
